### GPS Increases Footprint in Australia

**Vancouver, British Columbia – June 5, 2025 - Great Plains Metals Corporation ("GPS" or "the Company", TSX-V: GPS, Frankfurt Exchange: 8VC)** is pleased to announce the signing of an Earn-in and Joint Venture Agreement ("Agreement") with Godolphin Tenements Pty Ltd, a wholly owned subsidiary of ASX listed Godolphin Resources Ltd (ASX: GRL), over the Yeoval Goodrich Project in New South Wales, Australia.

#### **Key Terms**

The Earn-in and Joint Venture Agreement allow for GPS to earn a 70% Project Interest by completing the two milestones:

- 51% Project Interest, earned by making exploration expenditures of A\$1m over a 12 month period to include a minimum of 500 metres of drilling;
- A further 19% Project Interest, earned by making further exploration expenditures of A\$1m over the subsequent 12 month period to include a minimum of 500 metres of drilling.

GPS will be focused on exploring for a potential discovery of a large tonnage porphyry gold-copper system.

#### **Yeoval Goodrich Project**

The Project consists of two tenements, EL 8538 and EL 9243 (figure 1).

The Yeoval Project is located approximately 70 kilometres northwest of Orange in central New South Wales. The tenements cover an area of approximately 290 square kilometres. The area is underlain by granites, granodiorites and volcanics, and more than 60 historic mine workings occur within the project. The project area is readily accessible via sealed and unsealed roads and is adjacent to railway infrastructure.

The Goodrich Mine is a historic copper gold mine and was a major producer between 1868 and 1912.

The many gold-copper showing in the Yeoval district have been explored almost continuously since the 1960s, though mostly at shallow levels only, including completing both reverse circulation (RC) and diamond drill holes. Most of this exploration was

carried out prior to the Discovery 2000 airborne magnetics and radiometrics becoming available for parts of the Lachlan Fold Belt including the Yeoval district.

Copper, gold and other base metal mineralization is widespread in the region and the main mineralization styles include porphyry style gold-copper mineralization.

The Company is planning to publish a new website in due course under the domain name [www.greatplainsmetals.com](http://www.greatplainsmetals.com).

**Aidan Bishop, Director, commented:**

*“I am delighted that GPS has increased our footprint in Australia, a tier 1 mineral jurisdiction, following adopting our new name to reflect our strategic focus. We have recalibrated our portfolio to focus on drill ready exploration opportunities where a low cost, rapid discovery model, can be applied. GPS believes that this approach offers the most attractive risk reward basis for creating value for shareholders.*

*The Yeoval Goodrich Project is at the most advanced exploration stage of the projects in our portfolio and we anticipate moving at pace to get on the ground and commence work. I look forward to providing further updates to the market in due course.”*
